

Sicrall – Tape for Sealing Internal membrane overlaps

The single-sided high-performance adhesive tape Sicrall 60 is specified for permanent airtight sealing of vapour control layer overlaps in the interior. Also butt-joints between wood-based panels (e.g. OSB) can be easily, quickly and reliably sealed with Sicrall 60 to make them airtight.

Sicrall 170 offers the optimum solution for airtight sealing of injection holes for cellulose insulation and large leakages in the vapour control layer in one work step.

It is hand tearable which saves time and minimises frustration and is safer when taping up internal membranes, while perched on a step ladder.

SIGA tapes are Airtight, Weathertight and Diffusible. Uniquely, they are also VOC free.

No off-gassing means no deterioration of product capability over time and better internal air quality, which is so important for Passive House and High Performance Builds.

Available Sizes: 60/170mm x 40m.

Your advantages

-
- ✓ extremely strong adhesion, reliable, long-term building value
 - ✓ sturdy carrier material, saves time in case of long overlaps
 - ✓ hand-tearable, saves time

It's as easy as 123! You will be a SIGA expert in no time at all!
