

Rissan — Tape for Sealing Internal circular penetrations and floor and ceiling joints

A specialised armoured tape with elastic properties allowing it to be melded tightly around circular penetrations such as pipes or cables, vapour control layers and wood-based panels. These areas are tricky and potential high leakage risks that can be easily, quickly and durably sealed airtight with the single-sided high-performance adhesive tape Rissan.

No rubber grommets are needed for any penetration. Just meld Rissan around the penetration, clamping around with fingers as you go, for a 100% airtight seal.

Image shows Rissan sealing the internal membrane (Majpell or Majrex) to the penetration.

Rissan 100 or 150 mm wide, combined with the primer SIGA Dockskin is the perfect solution for permanently airtight bonding of wall elements to floor and ceiling on the inside.

SIGA tapes are Airtight, Weathertight and Diffusible. Uniquely, they are also VOC free.

No off-gassing means no deterioration of product capability over time and better internal air quality, which is so important for Passive House and High Performance Builds.

Available Sizes: 60/100/150mm x 25m.

Your advantages

- ✓ extremely strong adhesion, reliable, long-term building value
- ✓ smooth carrier material, clings tightly around pipes and cables
- ✓ elastic, keeps joints sealed despite structural movements

It's as easy as 123! You will be a SIGA expert in no time at all!
