

Fentrim 2 (Perforated edge zone) & IS2 (Non-Perforated edge zone) – External Use

The black coloured, single-sided high-performance adhesive tape Fentrim 2 is the optimal solution for permanent windtight and driving-rain proof bonding of window and door frames in **solid construction on the outside**. It is therefore perfectly suited to many commercial and residential applications where solid structure facades are specified. A perforated edge zone provides perfect keying in for final coating like render, acratex or similar trowelled finishes.

IS2 comes without the perforated zone.

Fentrim 2 is available in the size widths:
15/85, 15/135 and 15/185 mm.
Pre-folded: 50/85

IS2 is available in:
75/100/150/200/250/300mm

Fentrim 20 for **internal use**, perfectly supplements Fentrim 2.

SIGA tapes are Airtight, Weathertight and Diffusible. Uniquely, they are also VOC free.

No off-gassing means no deterioration of product capability over time and better internal air quality, which is so important for Passive House and High Performance Builds.

It's as easy as 123! You will be a SIGA expert in no time at all!
